

The Girl Genius® Block Puzzle

Print these pages onto heavy paper. Cut out the four "T" shaped pieces and fold each one into a cube—so that you have four cubes.

Folding will be easier if you score the back of the paper along the fold lines with a sharp craft knife, but be careful not to cut too deeply—you don't want to cut all the way through.

Glue the tabs of each cube to the inside—this will be easiest if you do them in order starting with Tab 1.

For a more solid puzzle, you can glue the panels to a cube of wood or foam, but make sure you get each picture in its proper place—no shifting them around to make solving the puzzle easier!

Now that you've built your puzzle—take the four cubes and line them up in a single straight row so that each side of that row contains one of each of the four pictures—Dimo, Maxim, Oggie and the Jägermonster insignia (not necessarily in that order.) We have it on good authority that this is supposed to be reasonably challenging, but then, that authority probably never met our terribly clever readers. It's possible! We've done it ourselves!
